

Chapter 3

Cellular Respiration

Cellular respiration is the process by which cells break down glucose to produce energy in the form of ATP.

Key Terms

Mitochondria: the organelle where respiration occurs.

ATP: adenosine triphosphate, the energy currency of the cell.

Photosynthesis

Photosynthesis converts light energy into chemical energy stored in glucose. It occurs in the chloroplasts of plant cells.

Review Questions

1. What is the main product of cellular respiration?
2. Where does photosynthesis occur in a plant cell?
